

Teel

A World Leader in Plastic Cores

Film Cores

Teel's plastic film cores are used in numerous applications where their dimensional stability, smooth surface finish, and lack of particulate are critical to the success of the end application. Teel is a world leader in tolerance for cores and can achieve TIR of less than 0.025" on many parts. We also offer custom cut lengths, custom printing, and custom color striping to help in core and film identification. Teel's commitment to quality is demonstrated by our ISO 9001 and 13485 certifications. Cores are manufactured in Baraboo, Wisconsin.

Film Core End-Use Applications

- Clean room laminate
- PVB film
- Window film
- Paint protection film
- WIP
- Medical packaging

In-House Capabilities

- Extrusion
- Injection molding
- Machining
- Printing
- Striping

Material Options

- PE
- PP
- Filled PP
- HIPS
- ABS
- Custom options
